"OTHERISATION OR MARGINALIZATION OF AUTISTIC CHILDREN" - this is the 'Festering Wound', that I have been combating with, regarding myself an observer of Autistic children. It's been years, that I have been embracing my Autistic children - evaluating, assessing, consulting, treating them while deciphering their unuttered pain or discomfort. While dealing with the sky-rocketing cases of Autism, and considering the 'Vaccines', as one of the responsible factors behind Autism, I have been asked a glaring question, innumerable times. If vaccines are the compelling factors of Autism, then why every child is not affected by Autism while everyone is being vaccinated? My answer is if a child gets vaccinated and he has a strong history of OCD and BIPOLAR DEACTIVITY among the members of his family, then he easily becomes a victim of Autism or complex neurological Dynamic disorder.

Along with the detailed explanation of this above-mentioned answer , I have extracted and established some points, based on my meticulous observation. They are as follows:

- 1) A major part of the Autistic children suffers from prolonged Green Diarrhoea around the age of nine months. These children are also reported to defecate hard stool around the age of fifteen months.
- 2) Analytical observation reveals that autistic child's excreta have some Specific pattern. After 15 months of age of the child, the front portion of excreta is burnt-like or chocolate-colour, corn-like rotund or knife-like structured; sometimes the tip of the excreta is like the tip of the bullet, and the rest of the part seems to be yellow or partly yellowish. These children are reported to defecate full-sized corn-shaped faeces. Usually, these children are not prone to hand-flapping. They are passionate onlookers of spinning. Some children do not defecate in the conventional style of sitting or squatting posture. Rather they defecate in standing posture. The stool is usually so rotund/fat that it is aching to the rectum. To avoid the pain, naturally, the child resists defecating and it is being regarded as constipation.
- 3) Some children become habituated to defecate more than twice a day, even four times a day. The faeces is usually semi-solid, fermented- patterned, or curd-like, resembling loose bowels. These children are typically prone to make 'Whining

sound" or "frog-croak" sound. It has been observed; these children love to contemplate fully on string, rope while playing. Usually, children, defecating loose stool, are attentive players, only with rope or string. They can consume almost all kinds of food, but they are incapable of chewing food. Usually, they swallow their food.

- 4) A thoughtful observation reveals that children, who defecate hard stool, have stiff palm of the hands and similar tough soles of the feet. These children whimper in the sun and hold a part of their forehead with their tiny hands. They are fond of chips and Cadbury. Their muscles are stiff in comparison to others. Even they don't like to rise to anyone's lap. Usually, they don't allow anyone to touch their head.
- 5) Some Autistic children develop a strong aversion to hair-cutting, combing of themselves. Even they do not allow wiping hair after a bath or being drenched, as they have a strong disliking for rubbing.
- 6) Years of affinity with Autistic children and meticulous observation of them, have introduced me to some habits or presentations of Autistic children. Some children have the habit of striking various surfaces with hands or other objects and they seem to be amused at the audible outcome, coupled with the rubbing sound of objects. Some children demonstrate a habit of throwing the ball against the windows, throughout the day; some seem to bang the walls or other household items with their hands and any favorite objects, without giving any prior indication. After days of repetitive striking or banging for days after days, their palms become hardened and thick-skinned. To others, it may be a deafening cacophony but what drives them, probably, is the Tinnitus or some unuttered, unexplained pain in Arms. Observation reveals that these kinds of Autistic children are somehow to be Scoliotic-patterned. Autistic children tend to swallow food instead of chewing. This leads to various other complexities.
- 7) Some children are prone to make self-injury, self-biting, and very bewildering experience for parents and doctors! The point of injury is being observed to form a Keloid pattern. Their saliva carries a metallic smell.
- 8) It bears testimony to the fact that Eyebrows of Autistic children are very much thin, consisting of few hairs. The eyebrows are reported to be distinct and noticeable with the development of the brain or functioning of the brain. Levels of Intellectuality can be fathomed from the shape or transformation of eyebrows.
- 9) In my observation, the earlobe of an Autistic child is very puny and thin. It gets fleshy and sturdy, *vis-a-vis*, with the development of the brain. The pinna and

earlobe are to some extent more fleshy in case of partly-improved Autistic children.

- 10) There are lots of instances of intolerance of heat among Autistic children. Often, they resort to pouring water upon the head, after abruptly entering into the bathroom. To mitigate heat, they place their head under running water. But, despite this, if their clothes get wet, even while drinking water, they become irritated and demand for taking off clothes. Similarly, they do not like food-particles, getting on their dresses. Instantly they prefer changing dress. Some children have a strong disliking for setting or placing their feet on the wet surface of the bathroom. For avoiding that, they prefer to keep their feet on their parent's feet, while having a bath. THESE CLINICAL PICTURES CLEARLY BEAR TESTIMONY OF THEIR OCD CHARACTERISTICS.

Children diagnosed with Autism seem to be craver of cool-air. Usually, they open the freeze-door and enjoy the chilled air. They are usually fond of devouring ice-cream. These can be presentations of the burning sensation, they suffer from.

- 11) There are clear instances of old injuries turning into keloid in the case of Autistic children. Multiple corns and enlarged Sebaceous glands are a very common phenomenon among slightly-improved Autistic children and children with Asperger's syndrome. Some cases of Lateral condyle of tibia Lichening or protuberance skin lichening, are also being observed.

- 12) Surprisingly, these children develop some milestones, which are being misinterpreted as Behavioural Disorder. Some are described below:

- a) Some children get engaged in high levels of spitting.
- b) They tend to touch their tongues with their fingers frequently.
- c) Sometimes these children exhibit the habit of putting their fingers in their Anus and trying to have that smell, curiously.

Children, exhibiting these presentations are, to some extent, in better condition.

- 13) Autistic children exhibit the habit of consuming food after smelling (to get a sniff). This can be regarded as a typical characteristic of OCD. Some children exhibit the habit of pressing their teeth of upper and lower jaws (sometimes gnashing), while eating in mealtimes, for avoiding food. Some tend to keep their food unchewed or unswallowed beside their gums, for long hours. But, they cannot withstand the sticky feeling of food particles, getting over their face and body. Instantly they prefer wiping that.

- 14) Excessive hand-flapping, running around, less eye-contact are the prime factors behind Urinary Tract Infection and Orchitis, among Autistic children. Some of these children develop the habit of pressing their eyes, with their fingers, obstinately.
- 15) SEROTONIN is a neurotransmitter that bears a resemblance to Thimerosal or Methyl mercury, in terms of possessing the characteristic of 'Temperature Regulation '.They possess one of a kind dissimilarity also. Serotonin, originated from the human body, patronizes our overall wellbeing, but, methyl mercury is thrust into our body, through vaccines, resulting in various complications. On the other hand, it is discernible fact, that Microbiome is profoundly related to Serotonin. If explained briefly, it can be said, Serotonin is regulated or energized by the Electric impulses, developed by Microbiome. So, the proper amount of Microbiome in the system, and, Methyl Mercury (bearing the thermal characteristic of Serotonin, and, applied through a vaccine), and, last but not least OCD AND BIPOLAR DEACTIVITY genes--all have unifying factors behind a child's ADHD.

PROPER MICROBIOME + REACTIONS OF METHYL MERCURY + OCD, BIPOLAR DEACTIVITY GENE = ADHD

On the other hand, in some cases, there is an absence or deficiency of essential Microbiome, making them incapable of forming the colony. If this condition is being added to the toxicity of Methyl mercury or reactivity of Thimerosal, it may disturb or damage the good quality of Serotonin, of being the 'Temperature Regulator '.It commonly leads to the disruption of cognitive matters, simultaneously with Hyperactivity, resulting in Autism of the child.

DEFICIENCY OF ESSENTIAL MICROBIOME + DISTURBED SEROTONIN + REACTIONS OF METHYL MERCURY OR THIMEROSAL = AUTISM

A moderate study reveals that generally, Mercury level is higher than in people with Autism, usually indicated by Hair Metal Test. On the other side, Thimerosal is being used in the manufacturing vaccine. Our conventional belief is that the amount of toxicity, present in it, is too little to harm the human body.

Then, the million-dollar question follows: Why the Mercury level and Aluminum level are so prominent in HAIR METAL TEST?

It is an undeniable fact that Abdominal Allergy is closely associated with Microbiome. Many children, even elder ones, may develop Abdominal Allergy to many foods, resulting in IBS or severe constipation or Irritable mind or Anxiety, individually. Some may experience constipation after having bread or 'roti'; some may experience stomach

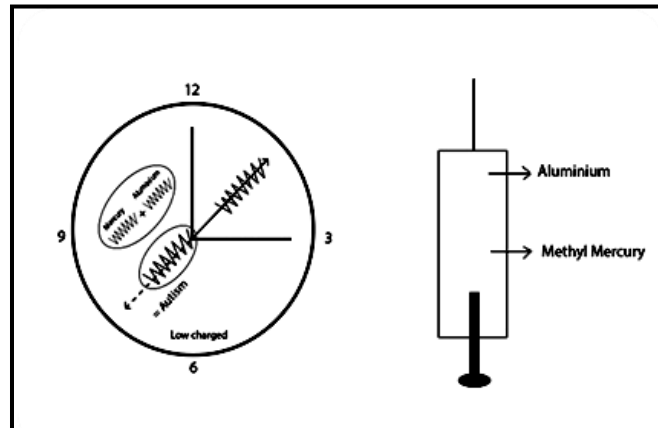

pain or discomfort after having an egg; someone is lactose-intolerant. So, how can the theory of Uniform-diet be effective? The "cure-key" to all problems emerges from only one thing that is **OBSERVATION**.

- 16) Lack of confidence and fear psychosis are commonly present among Autistic children. Generally, they cannot write independently. What they want is someone's touch over their hand, for being capable of writing. Graphologists opine that it is the brain that writes, not the hand. So, handwriting blossoms in many varieties as children's personalities. Children suffering from these symptoms, communicate in a whispering tone. Curing of stool abnormalities naturally leads to the betterment or enhancement of speaking volume in Autistic children.
- 17) In my observation, there must be some strong history of OCD and Bipolar Deactivity in the family of an Autistic child. There are strong pieces of evidence of members of the family being cosmetic-lover, flavor-chooser, excessive touchy, arrogant, recluse-loving, and constipation-complaining. If a child belongs to this type of family and gets vaccinated, and one more Autism case is being reported.
- 18) We, the human being are not also an exception, when it comes to Circadian Rhythm. For easy illustration, let's draw a clock, consisting of three hands, denoting hours, minutes, and seconds. Serotonin is the compatible battery, which is instrumental in the proper functioning of Circadian Rhythm or Biological clock. If the battery is low-charged, the Second's hand of the clock starts doing unusual repetitive movements (oscillating- patterned), which is very much similar to the repetitive behavior of the people with OCD and BIPOLAR ACTIVITY. People with OCD are obsessed with perfection and they are never satisfied or assured with their work, resulting in repetitive movements. Similarly, people with Bipolar Deactivity are temperament-changer within moments, indicating the same oscillating or repetitive pattern. Naturally, their children are the carriers of the same Genes. If they get vaccinated, the preservative contents of the vaccines, the methyl mercury, and aluminium are also being injected into their bodies. Both of these components are 'Temperature Regulator'. We know that Heat expands Methyl mercury, and cold condenses it. Similarly, Aluminum has the capacity of quickly transforming itself into heat or cold, according to temperature. So, it can be definitely said, if the gene-factors (carrying OCD /BIPOLAR GENES), is being United with the Vaccine-factors(methyl mercury/aluminum), the child cannot escape from Autism. It is the main reason for the well-being of other children (non-autistic), despite being vaccinated.

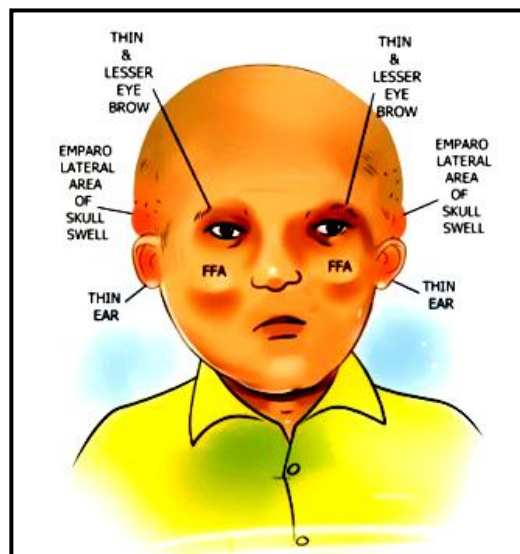

So, the Genetical relation theory can be concisely thus:

Gene-factors (carrying OCD /BIPOLAR GENES) + Vaccine-factors (methyl mercury/aluminum) = Definite case of Autism.

The heart-rending difference is that our Autistic children suffer, not only from a chargeless battery but also from heavy metal activities, through vaccines, thrust upon them, without their permission, in their innocence.

19) Nowadays, one common factor is Head Swelling at Lateral Temporal sides, among maximum Autistic children. Before the trend of vaccination came into vogue, before the 1980s, this kind of swelling of the head at these particular areas, was a rare phenomenon. Both, The Inferior Temporal Gyrus and the Middle Temporal Gyrus contribute a pivotal role in visual processing and visual object recognition, the cognitive process including semantic memory processing, language process, and integrating information from different senses, like eyes, nose, and ears.

Cystic swelling behind the ear and cystic swelling in the penis and scrotum; are also visible among Autistic children. Even the shape of the head differs, with every individual child. Whether this kind of swelling is the outcome of vaccinations, is yet to establish. But, almost, in every home, our older ones, our grandparents always complain about not seeing this feature in the child's head, in their time.

While manufacturing vaccines the least amount of components is being used. So, if that transforms into derogatory factors, to combat it, to deactivate it, a similar type of least amount of dose, consisting of tiny molecules, is to be applied. Tiny molecules, those are hard to find even through microscopic instruments, and those who are very much Similar to Microbiomes, *vis-a-vis* shape, size, and categorization, according to Homeopathic Higher Dilution.

It should be kept in mind that, around the world, there are numerous hypotheses, and confusions regarding Autism. one commonly asked question is- Which is the most effective treatment? Modern medicine or Therapy or Homeopathy? Adhering to my above-mentioned observations, it must be added that, in every stage, a Dynamic disease can always be cured by a Dynamic remedy that is **HOMEOPATHY**.

- 20) It is very common among parents to worry about the yellowish color of teeth of children, some are wholly yellowish, some are vertically yellowish-stained. The foul smell of their mouth has a resemblance to rotten-leaf smell. This proves that Autism is closely associated with Microbiomes. People with strong OCD, who almost contemplate over water, spend a minimum of eight hours daily with water, are reported to have the same yellowish-stained teeth or stones in teeth. Surprisingly, they do not leave any stone (any brand of toothpaste) unturned, to deal with this. But, all in vain. In this reference, it is to be mentioned, these people's smell of mouth is typically the same as the smell of teeth of Autistic children.

Actually, neither the Autistic ones nor people with OCD, like to smoke. The reason is they cannot tolerate any kind of smoke. They tend to like dry food and AC. They are passionate about fragrance. People with OCD, generally like any aromatic, fragrant element, even kerosene, tarpon oil, phenyl, naphthol, body powder, body spray. They prefer white-colored food and smell every food item before having that.

To smell before eating is being regarded as a common symptom of Autism. But, it is better to consider it as a Milestone. This representation more accurately proves that Autism is not congenital. These children possess every feature of normal children, some are in dormancy or prevented from blossoming,

sometimes with unmentionable selfishness or perverted thought. Naturally, the presentations are also perverted. Autistic child is evident in OCD Gene and Autism strongly demonstrates Microbiome Missing Generation.

- 21) Among my child patients, there was one kid who got a strange fascination with the head of raw fish. He had to grab it by any means. The child's walking had a resemblance to the slithering of a snake.
- 22) It is not an exaggeration that flat foot is the most common phenomenon in every Autistic child. At first, even I was irresolute or doubtful about the reason for this uniformity. One twelve-year-old normal boy comes to visit me, with constant neck- pain and sole-pain, with every single walking step. History discloses that, at the age of nine years of that boy, his mother suddenly acknowledged that the MMR vaccine was still due. Instantly, she rectifies her folly and the boy is vaccinated with the MMR vaccine and within eight months the boy starts to experience pain. Clinical X-Ray of the boy reveals, increasing bone -size and decreasing joint-space. A little bit of observation is capable to indicate the fact that every vaccinated child has flat foot.
- 23) There are multiple examples of children, suffering from Measles, even after being vaccinated with Measles vaccines. Not only these children have become victims of Autism, but also they have revealed themselves to be Spinning Expert, undoubtedly. They are Known to spin even a plate easily at their hand.
- 24) Many have been reported to be fascinated by the Rotavirus vaccine, with the promise of preventing Rotavirus Infection and strengthening immunity power. They got their children vaccinated and within a certain period, they experienced Green Diarrhoea and complete or partial inability to walk, owing to impairment in motor condition, in the vaccinated children still, the number is fewer.
- 25) Meticulous observation evokes the picture that people with OCD, are far more dangerous and obstinate, in comparison to people with Bipolar Deactivity. Never OCD people accept their follies and confess, while people with OCD, easily admit their follies and confess and do necessary changes, if required. Usually, they remain apparently indifferent, despite being cheated or deceived.
- 26) MMR VACCINES DOSE - one of the most conventional, controversial, contributory vaccines, designed to prevent, M=mumps, M=measles, R=rubella. Rubella is said to be the stage, where measles occurs in pregnancy, resulting arrival of a child with a partial or complete disability. So, where is the accuracy or necessity of vaccinating Rubella, even to the male children who are incapable of giving birth?

- 27) It is customary to apply the Hepatitis B vaccine, on the very first day of an infant's life. Is it logically explainable or acceptable? As the child survives solely on breast milk and is not acquainted even with outside water, the necessity of such vaccination is futile.
- 28) It is undeniable fact Autism Spectrum Disorder is a state of mental indisposition or mental disability. Cerebral palsy, Periventricular Leucomalacia, DMD are considered to be a culmination of both mental and physical disability. These facts are aimed at providing an insight into the real case history and number of disabled children in India. If the total number of, cerebral palsy, Asperger's syndrome, Red syndrome, Heeler Syndrome, Duchenne Muscular Dystrophy, periventricular Leucomalacia-are being considered as mentally indisposed, then automatically the ratio of normal children and mentally disabled children will indicate a shocking phenomenon. So, a deep introspection as well as the agenda is quintessential.
- 29) If we give acceptance to the fact that, 'New species of Microbiome' or 'Absence/deficiency of Microbiome' or 'Genetical abnormality'- all have overwhelmingly important roles behind physical or mental disability, then it must be admitted that Virus will come in shape and form of new species. Because the first mutation of the virus is that, the virus is alive inside the body and dead outside the body. So, according to the Genetical Defect theory, established by WHO and CDC, new species of the virus is sure to be developed. They have considered the Gene factor, solely responsible for disability. Naturally, our virus will be mutated more and more.

It can be established that

Man-made Disease = common drug.

Genetic Disease = Individual drug.

- 30) We, a major part of the doctors, consider Genetic disease or disorder, as solely responsible for Autism. Then is it desirable for us to advice for therapy? How can we cure mental disability, utilizing therapy? Where is the contribution of chest-thumping supremacy of medical science as well as doctors? Prescribing therapies can only lead to conception, that is, "Therapy can develop Genetical Structure."
- 31) This can be said with firm conviction that the condition of an Autistic child can be improved naturally if vaccine toxicity lessens or wanes with time. If doctors advise and prescribe for therapies, it is very much unfortunate to regard Medical Science as 'infertile'. Their patronization of therapy raises one

question. Whether the doctors are responsible for this condition of Genetical Mutation? By anyway all must be alarmed. It is discernible fact, that a child who lacks any feeling or realization, can not respond to any existing therapy, positively. How does any therapy bring cure and enlightenment to that child, who is devoid of any feeling? So, a reduction/lessening of vaccine toxicity can naturally direct the child to normalcy. Therapy is not capable to do any new Gene mutation, as it is not a medicine.

WHY HOMEOPATHY?

The sphere of Homeopathy is wide-ranged. While doing Homeopathic Drug Proving, it is being applied to the human being, unlike other 'pathy', which experiments with Rats. It is a well-known fact that Homeopathic drugs do not disturb Microbiome. Homeopathy is blessed with more than 5000 drugs, each one having individual mental and physical relations.

In Avogadro's Law, there is no theory of Dynamisation of Homeopathic drugs. But, in connection with Kohlrausch 's theory, homeopathic globules contain very effective substances.

If the "Blessed Two Drops "can act as "NECTAR", saving thousands of lives, then why can't Homeopathy, the panacea, cannot heal Autism?

According to Kohlrausch's law, Homeopathy is based on the Dilution process. It carries all the virtues of the source and every potency carries Isotope of its origin medicines.

The country where Homeopathy is well-acclaimed is free from the vicious circle of Autism, as darkness and illumination cannot co-exist.

Very often we come across doctors, world-acclaimed politicians, parenting Autistic children. Then how can the Genetic theory be considered apt, as doctors and the world-acclaimed leaders are regarded to be genetically superior or gifted? In reality, Autism does not spare anyone; it is affecting the lives of children, irrespective of social, educational or financial status, culture, or anything else.

While proceeding towards the conclusion, it can be said that when a child arrives in this universe, he/ she becomes the 'apple of the eye' to parents. Almost all parents, according to their capacity, arrange better care, better food, better paediatrician, even better vaccination, categorized as 'pain-less vaccination'(promising to lessen suffering or fever symptoms). Even if we ignore the future consequences of vaccination, how can a needle, piercing a baby's delicate skin and the nerve be painless? In search of welfare for the children, we are unknowing, summoning hardships for them, by arranging

vaccination and processed or canned or convenient food, going against Mother Nature, violating her rules.

For the sake of argumentation, let's give acceptability to the conventional theory that Parent's gene, is, solely responsible for Autism. In that case, the characteristics which are explicit in parents should be explicitly present in children as well. If children are being regarded as Mirror of mother and father, then their reflections are to be reflected, even their typical Characteristics of OCD and Bipolar Deactivity. But, strikingly, a completely new species of a human being is being observed that is Autism, classified in various categories. Is the gene the most crucial factor?-That is the most relevant question. Abiding by all the conventional regulations, management, advice lots of kind, superior service, have been dedicated to the infants after they arrive on this planet. Perhaps the most befitting answer, related to the cause of Autism, is being hidden into these.

It is pertinent to mention the commonly asked glaring question...

WHY EVERY CHILD IS NOT AFFECTED WITH AUTISM WHILE EVERYONE IS BEING VACCINATED?

Maybe the answer is:

OCD/BIPOLAR DEACTIVITY (strong history) + Vaccination = may cause Autism or complex neurological dynamic disorder happens.

We are admitting to the readers that still we are incapable to offer a total 'cure' to some children, having epilepsy with Autism. A little bit of speech and realization, understandings have improved to some extent. Yet the result is not satisfactorily perfect. To answer some unanswered questions and presentation of unseen arenas, are our motto.

It should be kept in mind that torn shoes can never be transformed into new shoes but new shoes can anyway be torn. It can be sewn too. So, doctors are meant to treat and cure and scientists are meant to ponder over science.

Everything in this universe has an exception. For example, water is destined to descend from high to low. But, we have the exception of an artesian well, where reverse Nature of Water is being followed, water ascends there. Lots of such exceptions are there.

So, instead of blaming and criticizing the Gene, it is better to blame our competitive mindset and perverted, unnatural attitudes.

In this context only one sentence is apt, the more autistic children there are in a country, the more defective genes the country bears.

These above-mentioned observations direct us to appeal to everyone, especially to people with OCD and Bipolar Deactivity please observe your children, from the first day of their arrival into this universe. This universe is for all. Everyone has his reason for existence, the scheduled share of happiness and gloom, success, and failure. Everyone is resplendent with unique characteristics. Uniformity is not quintessential. Diversity is natural. From the first day of life, children should be observed thoroughly. If any unpleasant experience or problem occurs, kindly consult doctors, irrespective of any 'PATHY', and go for your logic, thought and decision.

The reason is only one:

The whole world opines, "Autism is Genetic" and "It is incurable."

We have not penned this for disdain or attacking people with OCD and Bipolar Deactivity. Here are just some observations, which lead to a conclusion **Autism is the revenge of Gene or GRIEVANCES OF GENE.**

A very popular saying/adage can be referred to here, **SMOKING DOES NOT CAUSE CANCER! SIMILARLY, VACCINATION DOES NOT CAUSE AUTISM!**

The explanation is ours.

Whatever the cause may be, our main motto is the salvation of Autistic children, keeping up the flagging spirit of humanity.
